

Figure 1. Schematic representation of the experimental design. The first part of the study was a pretest in which the effect of the number of items on the recognition of the items was tested. The second part of the study was a main experiment in which the effect of the number of items on the recognition of the items was tested. The third part of the study was a posttest in which the effect of the number of items on the recognition of the items was tested.

Figure 1 illustrates the experimental setup. A participant is seated at a table, looking at a screen. The screen displays a target (red dot) and a starting point (green dot). The distance between the starting point and the target is labeled 'Distance'. The distance from the participant's eye to the screen is labeled 'Distance to screen'. The distance from the screen to the target is labeled 'Distance to target'.
